

DP600 - Spiral wire link belts

Spiral wire link belts type 600 are made of double interlaced spirals, alternatively with a left and right orientation. The spirals are wound from round wire. The spacing of spirals can be dense or thin. The connecting cross rods can be straight or crimped.

s	spacing of spiral coils
t	spacing of connecting cross rods
d/axb	diameter / profile of spiral wire
D	diameter of connecting cross rods

Type of wire belts according to edges
